

# Robotic /Laparoscopic Hernia Repair

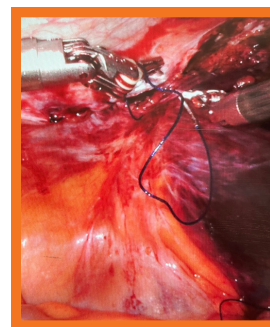

A hernia is defined as a gap in the muscular wall that allows the contents inside the abdomen to protrude outward. Most common are abdominal-umbilical and groin hernias.

Asymptomatic hernia -  
The current guidelines are that you fix the hernia if and when it starts to interfere with a patient's lifestyle.

As a member of the European Hernia Society Dr Phil Lockie keeps up with the latest information regarding hernia repair.

Using a console and a three-dimensional camera, the visibility of robotic surgery allows for enhanced tissue definition.

Robotic, Laparoscopic, Upper GI,  
Bariatric and Hernia Specialist.
